WEATHER OF CONCERN

Weather of Concern

- The National Weather Service has issued Fire Weather Watches across Northern California beginning 09/23/17 due to lowering humidity values and periods of gusty northeast winds.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

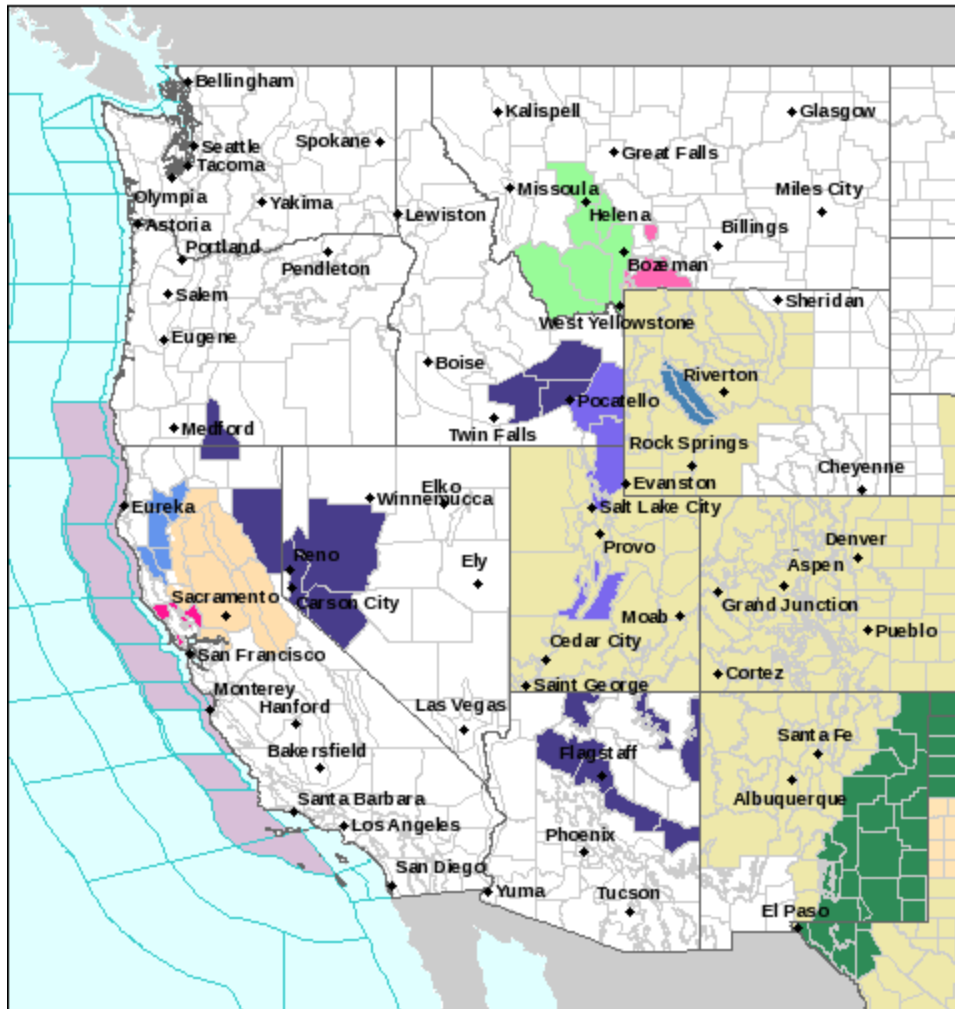

A high pressure ridge will be centered off the coast this weekend with gradually increasing pressure over the Pacific Northwest. This pattern will become a classic one that will generate light to moderately strong, gusty north to northeast winds with low daytime relative humidity (RH) and poor overnight recovery in the Sacramento Valley/Surrounding Foothills, and portions of the Bay Area and Mid Coast to Mendocino predictive service areas (PDAs) continuing into Tuesday. That wind/low RH combination is expected to bring "High Risk" for Significant Fire Potential to the Sacramento Valley and Surrounding Foothills early next week and increase Significant Fire Potential in the other PDAs mentioned. Peak wind gusts during this event will be 20-30 mph in and around the Sacramento Valley Sunday through Tuesday.

Temperatures will be warming around normal values early next week (near 90 warmest inland valleys). Minimum RH will decrease this weekend.

SOUTHERN CALIFORNIA

An area of low pressure over the Great Basin will maintain well below normal temperatures and humid conditions across the region through Saturday. Today mid 50s to mid 60s across the mountains and upper 60s and 70s in the valleys. Minimum humidity will be above 20% through today, except there will be some teens in the deserts. The snow level will be around 8,000 ft. A ridge of high pressure will build into the West Coast from the Pacific Ocean bringing significant warming and drying Sunday. Warmer valley locations across the region will approach 90 degrees and minimum humidity will drop into the teens across most of the region. Slow warming along with continued low humidity will occur Monday through the end of next week. Northeast to east winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of the region Sunday morning through the end of next week.
